

Variable height pallet labelling for automated pallet warehouses

Logopak International Ltd are the experts in automated pallet labelling solutions and offer a wide range of pallet labelling machines that cover all their customer's requirements. With the rise in popularity of fully automated pallet warehouses, Logopak has seen an increased demand for variable height pallet labelling systems. These bespoke machines are similar to traditional pallet labellers in that they can automatically apply up to 3 labels to each pallet (front, side, and back), but crucially they are mounted on a servo driven frame, allowing the labeller to rise to over 3 metres in height, meaning multi stacked pallets can be labelled with a single machine - the required labelling height is sent to the labeller by the line PLC. Logopak are the inventors and leading manufacturer of industrial print & apply technology: enquiries@logopak.net
