

# **Logopak Case Labellers at Major Convenience Food Producer**

Logopak International Ltd have recently completed the installation of two new 'Body 2' front apply case labellers for a leading convenience food producer based in Yorkshire.

The labellers are mounted above a twin lane conveyor, applying the GS1 logistics case label to the front of the shrink wrapped multi-packs as they travel along the conveyor. A special 'portal frame' was used to support the labellers, which allows for easy labelling height adjustment, plus long linear slides allow the labellers to be slid to the side of the conveyor for ease of maintenance.

Logopak's front apply machines features an ultra light weight **carbon fibre applicator arm**, allowing for high line speeds even when labelling the front of packs, plus the unique quick change print engine means downtime associated with print plate maintenance is eliminated.

The 'Body 2' labeller was specified for it's extra long **800m label reel** capacity, allowing for extended run times and reducing the amount of consumable change stoppages needed on this busy production line. A **run time of over 5 hours** can be achieved using a standard case label on a medium speed production line.
